

Sprint 3 Report

Online Retail Administration - 11/23/16

Actions to Stop Doing:

Stop pushing all the files that changed into github, we need to only push the files that we changed. This sometimes causing merge problems and over complicates the code.

Actions to Start Doing:

We decided that communication via slack was not working so we have begun communicating directly via text. Many were having issues receiving notifications from slack, and therefore were slow to respond.

Actions to Continue Doing:

Meeting at school instead of at home seems to give us a lot more focus and ability to complete more in a shorter amount of time because of less distractions.

Work Completed/Not Completed:

- As a developer, I need the product pictures organized in a way that it is useable by an automated system to create product profiles so that I can pick the image that displays by default on a product without database or code modification.
- As an online store operator, I need to be able to (modify) activate, deactivate, add and delete suppliers so that I can increase efficiency and profitability.
- As an administrator, I need to be able to edit permissions of my staff so that I can manage the security of my web store.
- As an online store operator, I need to be able to create tags and associate tags with products and delete tag associations so that users can easily find products on the site. We had originally intended to allow the modification of tag names and deletion of tags, but we were unable to complete this function. We intend to augment this core capability with this function prior to the final presentation.

Work Completion Rate:

- User stories completed: 4

- Hours worked during sprint: 105
- Days in sprint: 16
- User stories/day: 0.1875 stories/day
- Work hours/day: 6.5625 hours/day
