Working Prototype Known Problems Report

Team Name: Online Retail Administration
Product Name: Online Retail Administration
Date: November 21,2016

-Project has only been tested in Google Chrome. Functionality for different web browsers is unknown

-Adding a supplier is not fully implemented. Creating a supplier will update the database and show the supplier, but this is not how the final product will function.

-To activate a supplier, the field denoted to activation must be set to 'active'.

-To deactivate a supplier, the field denoted to activation must be set to 'disabled'.

-User permission does not check for admin privilege.

-The server hosting the database may crash.

-Tag name cannot contain a space.

-Side-bar is not functional, we kept it in there because it looks good.

-Bar-chart page is an example and only shows dummy data

-Adding a product from the project page sends an error. ***Minor problem before submission.

-Functionality for Statistics page is limited. The Controls are in but they are not connected.

-Data normalization has a minor error. ***Minor problem before submission.

-Able to access everything without logging in.

Statistics -> Profit over time:
-Profit over time should just be Profit over 90 days
-Y axis of chart should be labeled 'Profit' Not money
-Hovering over a week in the chart. Profit is listed as 'Date', dollar sign is at back of profit line instead of in front.
-Clicking dates does nothing but close the graph.

(Cosmetic) Statistics -> Top Products:
-Legend goes out of view on the right.
-Top products should indicate it's by units sold

(Cosmetic) Statistics -> Top Suppliers
-Legend would most likely go out of range like Top Products

-Top Suppliers should indicate what it's sorting b volume

(Cosmetic) Statistics -> Amount by Supplier
-Bar chart not filling up whole page
-Y axis labeled as 'Money' should be 'Profit'
-Page should display date range or if overall
-Clicking Products disables the chart entirely.
-Highlighting a bar has 'R' listed before $ sign
-Bar chart does not show date range

Permissions Page
-Permissions should be a drop down menu, instead of entering the permission manually
-Entering permissions manually one is able to enter whatever they want instead of only accepted permissions for the system

Tags Page
Adding tag- Pressing add does nothing the first time add is pressed. Pressing again shows an error informing the user to reload the page, but the tag has been added regardless. Field is not cleared upon adding. And to show tag has been added, the page must be manually reloaded
Removing tag, upon successful removal the tag is not cleared from any lists unless the page is manually reloaded

Suppliers Page
-When editing suppliers. Supplier fields don't prevent users from inputing incorrect characters. For example, Phone field takes alphabetic characters.
-Field names are also not specified to show the user which field is supposed to contain what information about the supplier
-When changing active or disabled field. The field is not a drop down menu indicating the only 2 options allowed. When the users enters a status other than active or disabled, the supplier is removed entirely from user view, unable to be edited
-'Add new supplier' box is not left justified to match the other table labels on the page
-When adding a supplier the adding field does not automatically disapper after entering a new supplier. pressing cancel button does not remove addding field. Only shows/disables add button

Product Manager
-'View Supplier' button in top left corner does nothing
-'Product' label for left column not lined up properly
